2. Add Two Numbers

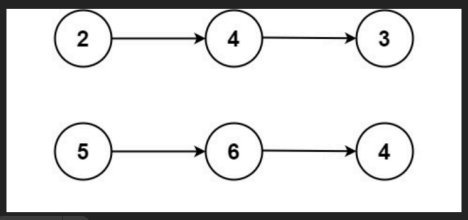

Solved

Medium | Topics | Companies

You are given two **non-empty** linked lists representing two non-negative integers. The digits are stored in **reverse order**, and each of their nodes contains a single digit. Add the two numbers and return the sum as a linked list.

You may assume the two numbers do not contain any leading zero, except the number 0 itself.

Example 1:

37.9K | 1.2K

Code | Note

C++ | Auto

```cpp
        ListNode* curr = dummy;
        int carry = 0;

        while (l1 != nullptr || l2 != nullptr || carry != 0) {
            int sum = carry;

            if (l1 != nullptr) {
                sum += l1->val;
                l1 = l1->next;
            }
            if (l2 != nullptr) {
                sum += l2->val;
                l2 = l2->next;
            }

            carry = sum / 10;
            curr->next = new ListNode(sum % 10);
            curr = curr->next;
        }

        return dummy->next;
    }
};
```
